Inverter

Super Multi Zone Inverter Heat Pump

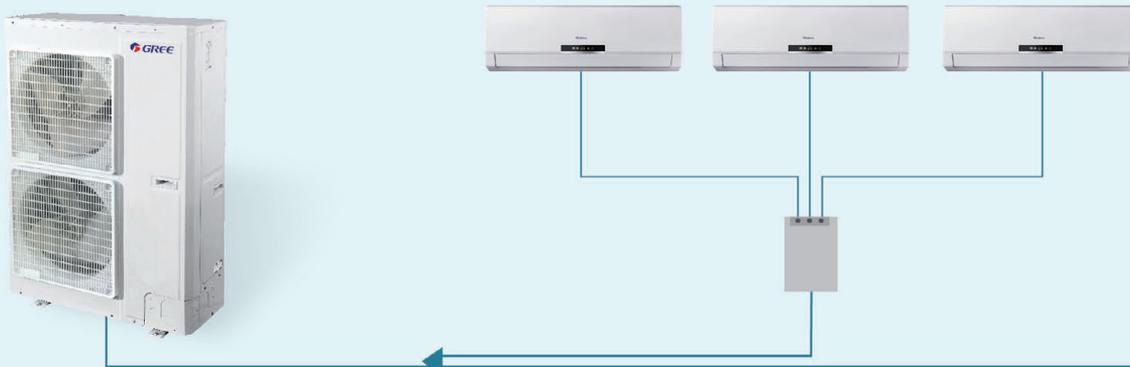

GREE+
SUPER

Multi-split System from 48,000-56,000BTU/h

Gree Super+MULTI is the latest generation of Multiple Inverter Air Conditioner, which is connectable up to 9 indoor units and offers rich choices of indoor units for different decoration requirement. With the GREE Inverter technology, the Super+MULTI can achieve a high energy efficient, steady operation, ultra comfort and low sound level to suit modern living environment.

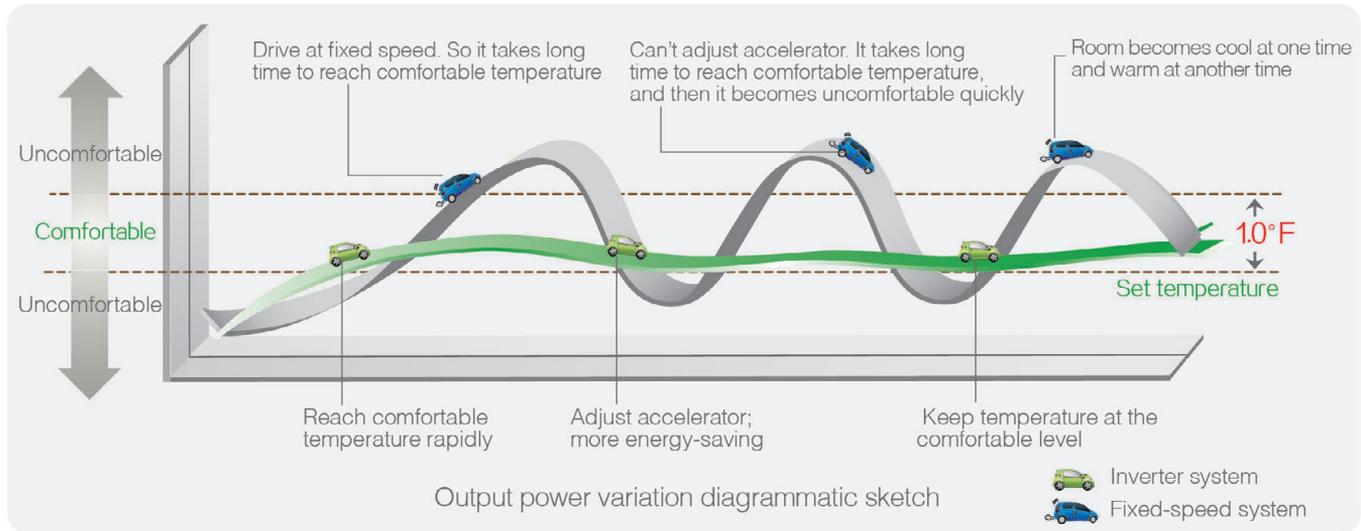

Maximum 9 Indoor Unit Connections

GREE Inverter Technology

Thanks to GREE Inverter technology, the unit operates with lower power consumption, lower noise and more comfort.

More Power Saving

GREE with advanced DC inverter 180° vector control ensures the stable operation of the compressor and saves up to 20% power per year (compared with the normal air conditioner).

Highly Comfortable

The GREE intelligent inverter control delivers the required capacity, according to the load variation from 10% to 120% and maintain the room temperature within $\pm 1.0^{\circ}\text{F}$ of the set

Lower Noise

The technology also optimizes the electrical sine wave to the compressor and results in smoother motor rotation, so that it can weaken the compressor vibration and peak of pipe stress changes, and lower the noise.

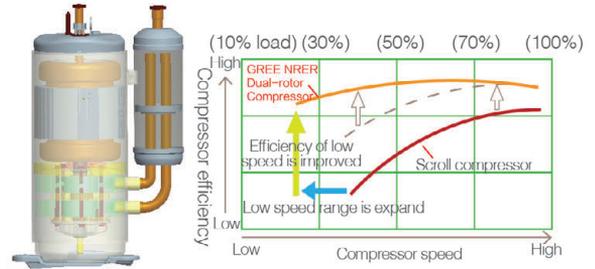

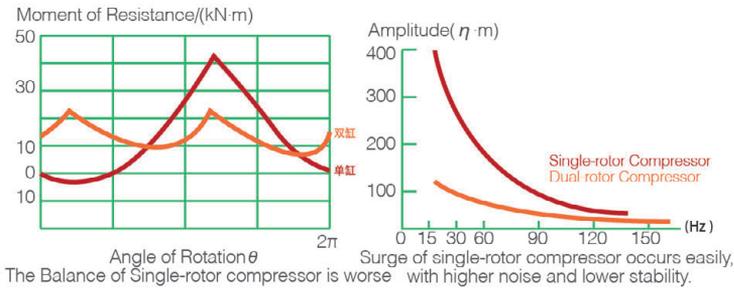

Optimized System Design

- | | | |
|-----------------|---------------------------|------------------------------|
| ① Compressor | ④ Components and Pipeline | ⑦ Built-in Debugger |
| ② Fan and Motor | ⑤ Heat Exchanger | ⑧ Service Port |
| ③ Oil Separator | ⑥ Electrical Box | ⑨ Flexible Piping Connection |

Compressor

The High Efficiency NRER (Non-Rare Earth Reluctance) Dual-rotor Inverter Compressor can fully utilize the reluctance torque of the motor for higher torque output that the efficiency can be increase by 5% with same output capacity and the performance of anti-demagnetization is better under high temperature.

GREE Dual-rotor Compressor VS Single-rotor Compressor

Compared with the single-rotor compressor, the Dual-rotor compressor overcomes the weakness of the poor balancing performance, and noise & vibration is lower, stability of low frequency operation is better.

GREE Dual-rotor Compressor VS Scroll Compressor

Compared with scroll compressor, the size of dual-rotor compressor is smaller, the weight is only 60% of traditional scroll compressor, the operation frequency range is wider, and efficiency is higher.

Fan and Motor

• Optimized Fan

Optimized fan reduces the operation noise of the unit, providing comfortable indoor environment.

• High-efficiency DC Brushless Fan Motor

High-efficiency DC brushless fan motor offers greater efficiency and reduces operating noise,

Oil Separator

Adopting high efficient oil separator, of which maximum efficiency reaches to 99%, with Intelligent Oil return operation, system will automatically recover the chilled oil efficiently to ensure lubrication of the compressor.

Efficient oil separator

Optimized System Design

Components and Pipeline

In order to further reduce the discordant noise due to the operation of components, dynamic simulation of product component is conducted. The 3-D simulation of damping design for the pipelines has efficiently eliminated the hydrodynamic noise of refrigerant and ensures the quiet operation of the system.

Heat Exchanger

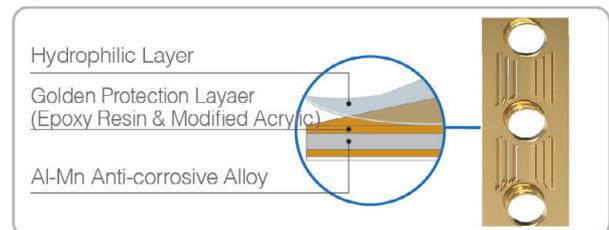

• High Efficiency Inner-grooved Copper Tube

Heat exchanging performance is increased with high efficiency inner-grooved design.

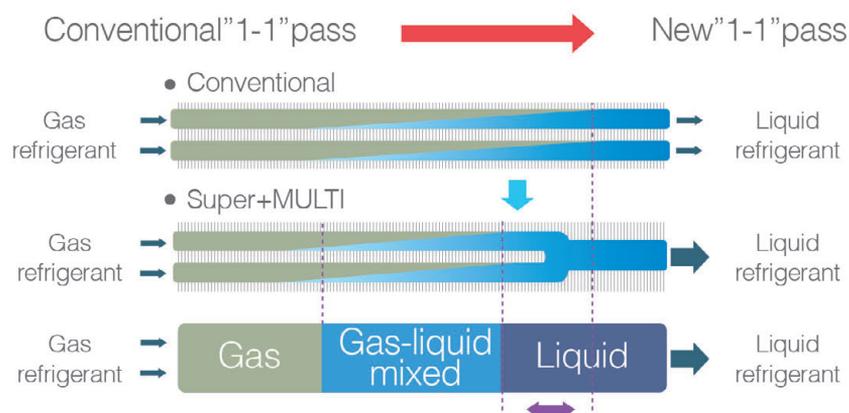

• Slit Type Fin with Anti-corrosion Coating

The slit type fin enlarges heat exchange area significantly by 5%, meanwhile the anti-corrosive performance in salt-spray testing is 200%~300% higher than conventional.

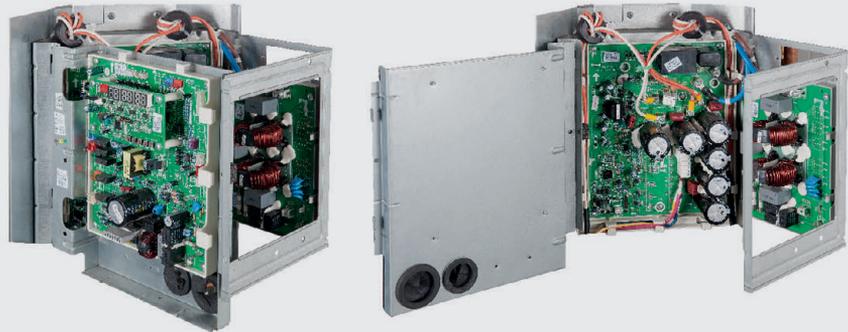

• New "2-1" Pass

The new "2-1" high efficiency heat exchanger design increased the exchanging effect and reducing the refrigerant pressure, system reliability is higher.

Electrical Box

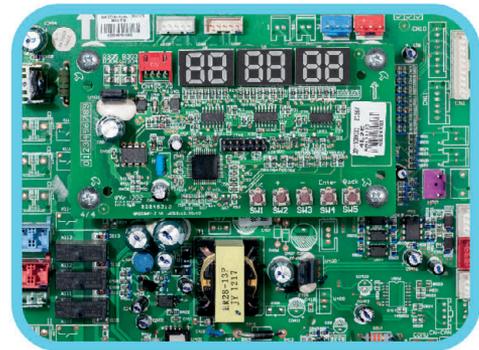

New electrical box, design with quick debugger, easier for testing, commissioning and maintenance.

Built-in Debugger

Unique design with built in debugger, convenient for commissioning.

- Automatically detect indoor unit numbers.
- Automatically assign indoor unit addresses.
- Automatically display real running function and error code.
- Option settings to suit the demand of the customer.
- Remember and look up history running data.

Service Port

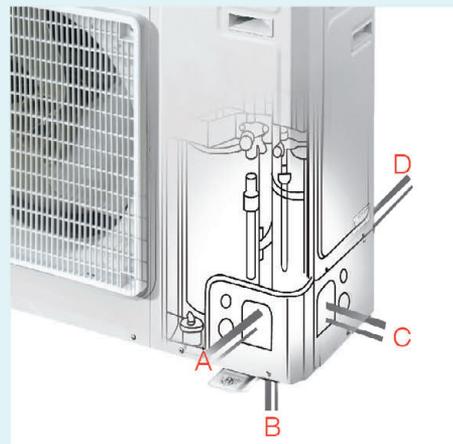

Special service port for easier pressure detection and maintenance.

- Detect the high pressure at cooling mode.
- Detect the low pressure at heating mode.
- Charge additional refrigerant.

Flexible Piping Connection

The gas and liquid stop valves can be attached from different directions for seamless installation.

Flexible Piping Work with BU Module

The Super+MULTI introduces the BU (Branching Unit) module to simplify the piping work, so that the refrigerant piping is easier in handling and connecting, installation time and materials can be significantly reduced.

• Quick & Safe

By using flared connection, the installation is easier with less welding, higher safety and reliable.

• Comfort & Quite

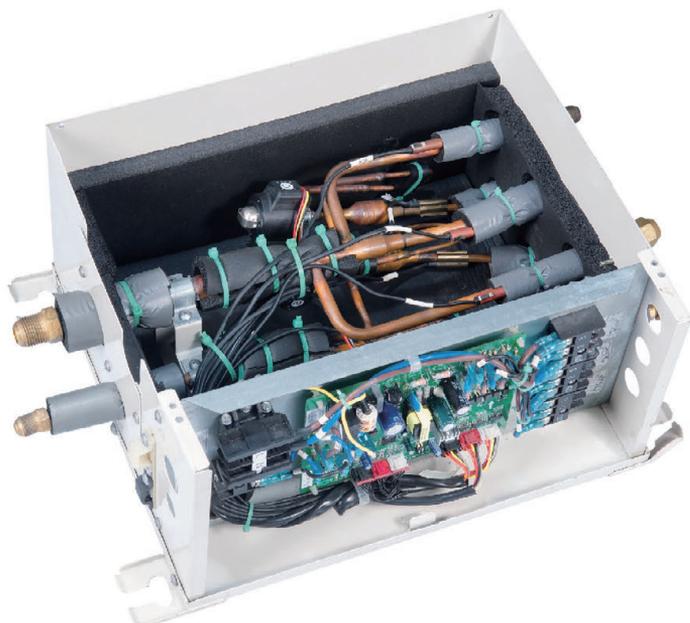

The BU module can calculate cool and heat loads and precisely distribute refrigerant to each room. EXV built-in BU module allows a comfortable silence for living.

• Convenient Service

Quickly check refrigerant leak point; the welding points are less so once there is refrigerant leak, the leak point can be quickly found.

• Y-Joint Connection

Quickly check refrigerant leak point; the welding points are less so once there is refrigerant leak, the leak point can be quickly found.

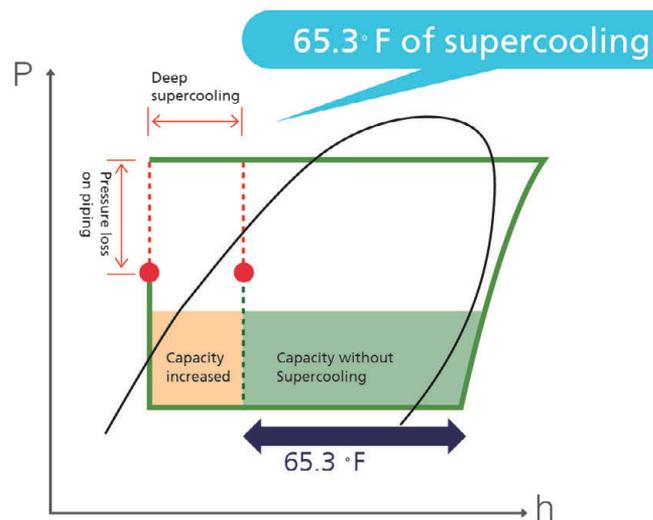

Liquid pipe

Gas pipe

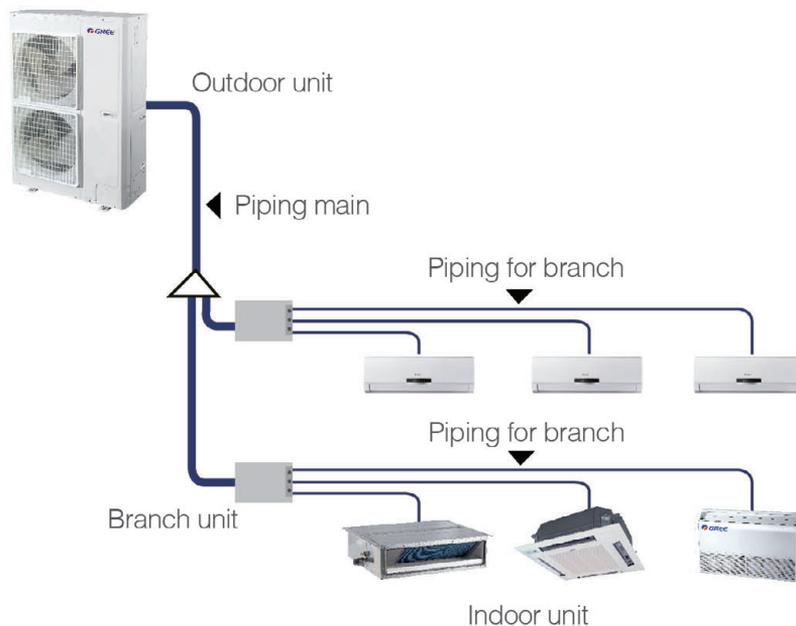

Super Cooling Technology

65 °F of super cooling is achieved by exactly control of EXVs and real-time detection of the temperature sensors, so that the max total piping length can reach to 475ft, which is 98ft longer than conventional product, and capacity decreasing less than 10% under 328ft total piping length.

Flexible Piping Installation

- Total pipe length ≤ 475 ft
- Total pipe length between outdoor unit and BU ≤ 180 ft
- Total pipe length between BU and indoor unit ≤ 295 ft
- Piping length between the farthest indoor unit and the outdoor unit ≤ 230 ft
- Pipe length between BU and indoor unit ≤ 49 ft
- Different in height between outdoor unit and indoor unit ≤ 98 ft

Wide Range of Outdoor and Indoor Unit

With various types of indoor unit and wide range of outdoor units, the Super+MULTI can satisfy both residential and commercial air conditioning requirements, such as villas, apartments, offices, shops, etc. It is not only an air conditioner but also a perfect indoor decoration.

Outdoor unit

2 models

48K Btu、56K Btu

There are 2 models outdoor unit for precise power to suit the size of house, offices of shops.
